### Issues/ UX Feedback:

| Issue                              | Description                                                                                                                                            | Improvement Options                                                                                                                                        |
|------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Inventory Management</b>        | The inventory system is difficult to navigate. Sorting and moving large stacks of items is cumbersome and time-consuming.                              |                                                                                                                                                            |
| <b>Resource Gathering Feedback</b> | It is not visually clear when a resource node, such as a tree or rock, has been fully depleted.                                                        | Add a clearer visual and audio cue for when a resource node is completely harvested, such as a distinct sound effect or a visual change to the node itself |
| <b>Performance</b>                 | The game suffers from significant frame drops, stuttering, and lag, particularly in visually complex areas or during intense combat with many enemies. | Optimize performance to improve framerate stability and reduce stuttering.                                                                                 |
