

Manual Testing Report

Tester: Todorut Victor

Platform: PC Windows

Mode: Multiplayer

Game Title:

Mycopunk

Overview:

This report summarizes manual QA testing performed on *Mycopunk*. It is structured to document technical issues, including reproducibility, expected vs. actual behavior, and their potential impact on gameplay.

Bugs:

	Bug Title / Description	Steps to Reproduce	Expected Result	Actual Result	Reproducibility / Priority
1	Auto-Sprint Cancels During Combat Actions / When moving with WASD while shooting or throwing a grenade, auto-sprint cancels unexpectedly. After the bug triggers, the sprint mechanic becomes inconsistent or entirely unavailable until restarting the game.	1. Enable auto-sprint (toggle on/off setting does not affect outcome). 2. Begin sprinting, then shoot or throw a grenade while moving with WASD. 3. Continue sliding, jumping, and firing without pressing Shift.	Auto-sprint should remain active while performing combat actions, unless the player explicitly cancels sprinting.	Auto-sprint cancels while moving and firing/throwing.	~1–2 times per play session / High
2	Pod Summoning Bug / When a player summons a pod near a building, there is a chance the entrance will spawn inside the building,	1. Stand near a building or large structure. 2. Summon the pod. 3. Attempt to	The pod should always spawn in an accessible area with a clear path to the	The pod's entrance spawns inside the building, making it	2/4 (~50%) / High

	making it inaccessible and trapping the player in the mission.	enter the pod and observe the entrance's location.	entrance.	impossible to enter and progress in the mission.	
3.	Enemy Lag/Clipping / Enemies occasionally lag, teleport, or clip through objects and hit the player without playing their attack animation.	1. Engage enemies in combat. 2. Move around obstacles or structures. 3. Observe enemy movement and attack animations.	Enemies should move and attack smoothly with their animations correctly synchronized with their actions.	Enemies suddenly appear in new positions or pass through objects, and hit the player without a visible attack animation.	4/5 (80%) / High

Issues/ UX Feedback:

Issue	Description	Improvement Options
User Interface	The UI feels cluttered and is not intuitive for new users, making it difficult to navigate menus and manage inventory.	The UI could be redesigned with a more streamlined and minimalist approach. Icons and menu layouts should be simplified to improve clarity and ease of use.
Visual Clarity	During combat, especially with multiple enemies and simultaneous attacks, the visual effects and on-screen information are overwhelming. This makes it difficult for the player to track their character, enemy attacks, and important combat cues.	Optimize visual effects to reduce screen clutter during intense combat. Key indicators for attacks, damage, and status effects should have a clearer visual hierarchy to improve readability. Adding a color-blind mode or customizable UI element colors could also help.
Crashes and Freezes	The game occasionally experiences crashes and freezes when a large group of enemies spawns. This disrupts the gameplay experience and can lead to loss of progress.	

Environment:

- Device: PC
- OS: Windows 10
- App Version: 1.0.4
- Build Type: Early Access

Conclusions:

Overall, *MycoPunk* is a unique-looking and fun online co-op game to play with friends. However, the UI, visual clarity, and stability issues, particularly the crashes, significantly impact the core gameplay loop. Addressing these UX issues would be a major step toward enhancing the game's polish and making the experience more reliable and enjoyable for all players.
